About

Full stack developer and problem-solver, apt at quickly learning new concepts and building tailored solutions. Passionate about developing products and services that provide users with mindfully built solutions, and learning new + innovative technologies.

Projects

Memo App

Note taking web application created with Rails, jQuery and Ajax. User registration and login utilize bcrypt password hashing and Rails authentication and validation on the back-end. Upon login, Ajax & jQuery enabled interface allows user to manage their memo creation, editing, and deletion on a single page without reloading. Memo's can be viewed and edited in both regular and expanded views.

See source code at https://github.com/susanmash/memo-app.

Screenshots of this project are also available on my website, susanmash.github.io .

JavaScript Tetris

Tetris web game application built using pure JavaScript and jQuery. Start and pause game controls and keyboard shortcuts provided. Players can move, rotate and expedite dropping shapes into their desired configuration just like in regular Tetris game app's. When row of is completely filled, it is cleared (removed) from the board and 10 points are added to the player's score.

See source code at https://github.com/susanmash/jstetris .
